

Importing and Installing Extensions to and from an On-Prem Registry

Overview

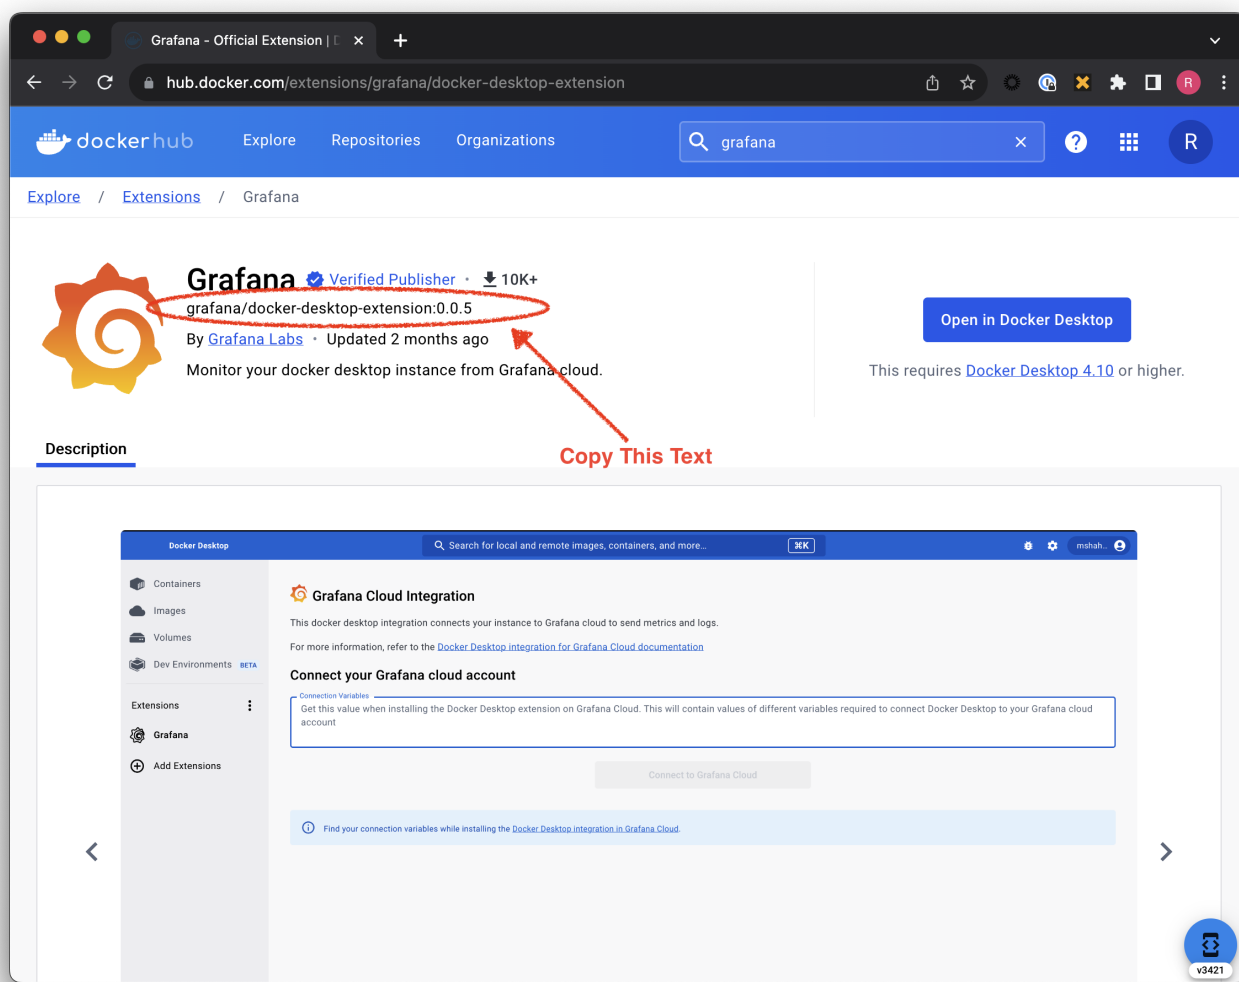

This walkthrough demonstrates how Docker Extensions can be imported and managed in an on-prem or privately controlled registry such as JFrog Artifactory.

Step 1: Find the Extension

Step 1a: Search

Step 1b: Copy the Extension's Name and Tag string

Step 2: Pull the Extension locally using the string copied above

```
$ docker pull grafana/docker-desktop-extension:0.0.5
```

Step 3: Tag the local Extension

```
$ docker tag grafana/docker-desktop-extension:0.0.5 <your-on-prem-registry>/grafana/docker-desktop-extension:0.0.5
```

Step 4: Push the Tagged local Extension to your On-Prem Registry

```
$ docker push <your-on-prem-registry>/grafana/docker-desktop-extension:0.0.5
```

Step 5: Install the Extension from your On-Prem Registry

```
$ docker extension install <your-on-prem-registry>/grafana/docker-desktop-extension:0.0.5
```
